

MSG 209 - BLUE FD15 MISSION SUMMARY

1
2 Good morning again Blue Team! We're starting to think about entry day down here, but
3 things aren't winding down quite yet – we've got another full day of science planned!
4 Changes include adding an IFM for Willie and Dave to troubleshoot ICOM B, and a
5 STROMA Transfer and a simo Supply/Waste Water Dump for Willie. We also deleted the
6 SIMPLEX burn which was originally scheduled near the end of your day. Continuing your
7 sleep shift for entry, you'll go to bed an hour later tonight.

8
9 Due do the great work yesterday on the MIST IFM you'll see several MIST runs on the
10 schedule today with free drift times noted.

11
12 The CM-2 Mist team is very pleased with the successful runs they have performed since
13 recovery of the Mist EMS. They appreciate all the extra effort you put forth for them!

14
15 The FREESTAR payloads are doing great. With no deviations from bay to earth we've
16 actually had a chance to sit back, catch our breath and work on our poetry a little. MEIDEX
17 is thrilled with the data that was captured over Brazil yesterday. It's a whole new scientific
18 arena for them to dive into. Who knows what else we'll discover when we get a chance to
19 analyze all of the data!
